Dear Colleagues,

the Italian Network of Psychologists’ Associations (INPA) warmly invites you to the 14th European Congress of Psychology (ECP) to be held in Milan on 7-10 July 2015 under the auspices of the European Federation of Psychologists’ Associations (EFPA). Both new research and best practices from all fields of Psychology are welcome. As stated by the EFPA General Assembly in Istanbul on 10 July 2011, a new commitment has been made to extend the contribution of psychological research and applications towards society as a whole and beyond the traditional recipients of psychological services. Policy makers and communities should benefit from the progress of Psychology in times of profound changes across all domains of life to promote health, education, work, well-being and welfare. The EFPA General Assembly accepted our proposal to host the 14th ECP in Milan in the context of the EXPO 2015, choosing the University of Milan–Bicocca as the Congress venue. The entire Italian psychological community has given its full support to ensuring the success of the Congress. Milan is a moral capital and an intellectual and business centre that attests to Italian excellence in many fields of arts, science and aesthetics. We will be honoured to welcome you in Milan.

Mario Sellini
President

Gian Vittorio Caprara
Honorary President
Dear Colleagues and Friends,

on behalf of the European Federation of Psychologists’ Associations (EFPA) I cordially welcome you to the XIV European Congress of Psychology. I am pleased to see a growing participation from Europe as well as other continents, which seems to signal that the global financial crisis and economic recession have indeed come to an end. Over the years the European Congress of Psychology has become the place to meet European psychologists and learn about advances in theory and research as well as educational and professional developments in Europe. I note with pride and satisfaction that this Congress has contributors from all over the world! Particularly noteworthy is the attention paid to the societal significance of psychology. As you will see, the Congress program contains many contributions demonstrating how psychology helps to understand, prevent and resolve human problems. You will note a special emphasis on the psychology of food and nutrition. This exhibits the support of the Congress for the World EXPO which is dedicated to the theme Feeding the Planet, Energy for Life.

Welcome to Milano!
